New Delhi

Learning Objectives

1. To recognize common tobacco products
2. To familiarize with different smoking practices and using smokeless tobacco in India and different parts of the world

Why to know different tobacco products?

- To be effective in tobacco cessation, the first step is to know what different forms of tobacco products exists, not only in India, but else where across the world.

Reason?

- Tobacco companies keep introducing tobacco in different forms, to lure more number of users
- In this era of global village and medical tourism, one may have to deal with persons of different regions of the world and their habits

Types of Tobacco Products

Simple classification

Smoking

Smokeless

New forms of tobacco

“Dissolvable Tobacco”

“Tobacco gum”

Smoking Tobacco

- Bidis/ Kretek (Indonesia)
- Cigarettes/ Cigars, Little cigars, cigarillos (Blunts),
- Hooka (Water pipes, Shisha, Mu'assel, Narghille, Argileh) Dokha (Iran), Kizami (Japan)
- Tobacco pipe
- Electronic Cigarettes
- Heated Tobacco Products (HTP)
- Herbal cigarettes

Bidis (India) and Kreteks (Indonesia)

- It is tobacco wrapped in Tendu or Tembuni leaf and tied at one or both ends. Most commonly used in India but exported to various countries including US.
- Bidi contains three to five times the amount of nicotine as a regular cigarette and places users at risk for nicotine addiction*.

Bidis (India) and Kreteks (Indonesia).....

- Kreteks is a form of bidis which in addition contain cloves and other additives. Also known as “Clove cigarettes”
- Regular kretek smokers have 13 to 20 times the risk for abnormal lung function (e.g., airflow obstruction or reduced oxygen absorption) compared with nonsmokers*

Both, bidis and Kreteks contain higher amount of Nicotine, tar and carbon monoxide than cigarettes.

Cigarettes and Cigars

- Narrow cylinder containing tobacco, which also contains glue, chemicals and fillers; it is then sprayed with nicotine extracted from the tobacco scraps, and shaped into cigarettes.
- Cigar wrappers are typically composed of tobacco leaf or paper dipped in tobacco extract. Large cigars can deliver 10 times the nicotine, 2 times more tar and 5 times more carbon monoxide.

Cigarettes and Cigars.....

- Cigars comes in different sizes- regular, small (called little cigars or cigarillos)
Some may have candy or fruit flavor.
- Blunts are wide, somewhat stubby versions of cigars.
- RYO – Roll your own – Both cigarettes and cigars are available with required constituents. It is much cheaper than the commercially available products.

Herbal Cigarettes

- It is tobacco and Nicotine-free cigarettes recommended as cessation aid, composed of a mixture of various herbs.(US and European)
- However, the Chinese Herbal Cigarettes do contain Tobacco and Nicotine. These are sold in Philippines, Singapore, Indonesia, Malaysia, Cambodia, Myanmar, Canada, and Taiwan.*
- Herbal cigarettes can carry carcinogens which can have health implications**

Hooka (Water pipe, Shisha, Narghile or Argileh)

- Hooka is used to heat, vaporize and smoke tobacco or flavored tobacco (often called Mu'assel)
- The smoke is passed through a water basin—often glass-based—before inhalation. But this does not reduce the harmful chemicals to filter out.
- Smokers can get up to 1.7 times the nicotine and up to 9 times the carbon monoxide exposure as a single cigarette*

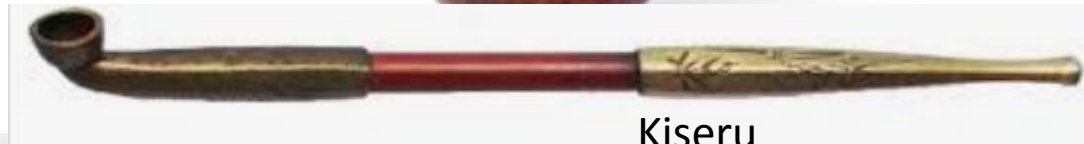

There is also an increased risk of infection** as hooka pipe is shared by many people

Tobacco pipe/ Dokha/ Kazami

Tobacco pipe is a smoking device comprising of a chamber (the bowl) for the tobacco from which a thin hollow stem (shank) emerges, ending in a mouthpiece.

Pipe

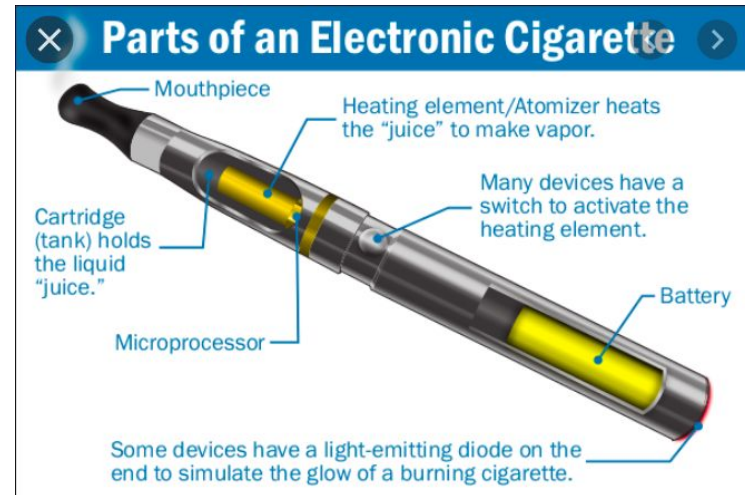

Kiseru

Midwakh

Dokha is a tobacco of Iranian origin mixed with leaves, bark, and herbs. It is traditionally smoked in a midwakh (smaller version of a pipe). Kizami is a tobacco product produced in Japan and intended for smoking in Japanese kiseru pipes (slender version of pipe).

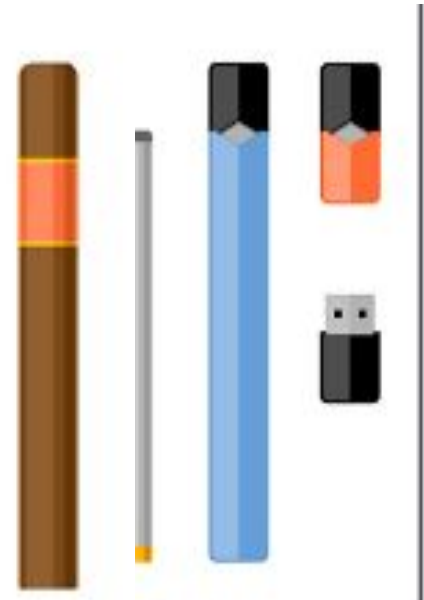

Electronic Cigarettes

- An e cigarette consists of an atomizer, a power source (battery) and a cartridge or tank.
- E-cigarettes produce an aerosol(vapor) by heating a e-liquid that usually contains nicotine, glycerol, ethylene glycol and flavors in propylene glycol. The user inhales vapor instead of smoke, and hence called “vaping”

Electronic Cigarettes.....

- E-cigarettes are also called “e-cigs,” “e-hookahs,” “mods,” “vape pens,” “vapes,” “tank systems,” and “electronic nicotine delivery systems (ENDS).”
- Bystanders can also breathe in this aerosol when the user exhales into the air, (same effect as passive smoking)
- Some e-cigarettes are made to look like regular cigarettes, cigars, or pipes. Some resemble pens, USB sticks, and other everyday items.

Heated Tobacco Product (HTP)

- It is also called heat-not-burnt product; was introduced in 2016. Example - IQOS
- It is also like e-cigarette, consists of a battery-powered heating system and generates an aerosol of Nicotine, smoke, tar and other chemicals.
- Tobacco is heated to 250-350⁰ C, temperature lower than traditional cigarettes (600⁰ C)
- A hybrid between e-cigarette and HTP can use both tobacco and e-liquid

Smokeless Tobacco

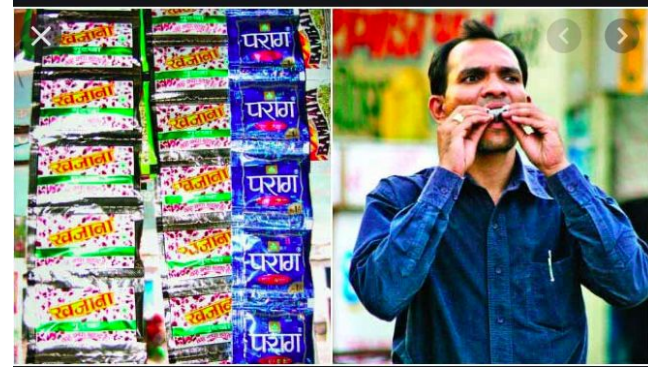

- Tambakhu and Tambakhu Pan
- Gutkha / Mawa (Faki or Masala)
- Dip/ Snuff or Spit tobacco/ Naswar
- Creamy snuff / Mishri / Gadaku (Used as a dentifrice)
- Snus (Sweden and other Scandinavian countries)
- Dry snuff/ Tapkir/ Bajar
- Dissolvable Tobacco & Tobacco gum
- Tuibur / Tobacco water/ Hidakphu

Tambakhu and Tambakhu Pan

- Tobacco leaves, flavored or mixed with slaked lime is chewed raw for 15-20 minutes and then spit out.
- It is available as pallets, plug or twist in western countries.
- Tambakhu pan contains tobacco with slaked lime, with or without betel nuts and other condiments wrapped in a betel leaf.

Gutka, Gutkha

- It is a chewing tobacco preparation made of crushed areca nut, tobacco, catechu, paraffin wax, slaked lime and sweet or savory flavorings. Popular in India, Pakistan, other Asian countries, and North America.
- Its users believe that gutka can act as a digestion aid, kill germs, and generally give a sense of well being. In fact 34.4% of smokers have switched to smokeless tobacco use as way to quit.
- Smokeless tobacco use is highly addictive. The nicotine in smokeless tobacco is more easily absorbed than by smoking cigarettes, increasing its addictiveness. As of 2015 it was the fourth most common addictive product worldwide.

Khaini/ Mawa/Zarda/ Mainpuri(Kapoori)

Khaini is sun-dried or fermented coarsely cut tobacco leaves mixed with slaked lime.

It is placed in mouth between the gums and cheeks and sucked slowly for 10 – 15 minutes. Occasionally, left overnight in the mouth. Used in India, Nepal, Bangladesh. Most popular Smokeless Tobacco product in India.

Mawa, in addition, also contains thin shavings of areca nut. Popular in Gujrat. Also called as Faki, masala.

Khaini/ Mawa/Zarda/ Mainpuri(Kapoori).....

Zarda contains tobacco flavoured with aromatic spices, menthol, herbs, raw kiwam, silver flakes, sandalwood oil etc. Lime is provided separately by the manufactures

Mainpuri is a dry chew containing tobacco with betel nuts, slaked lime, cloves, cardamoms, kewara and sandalwood powder, sometimes also catechue.

Popular in Mainpuri district of Uttar Pradesh

Dipping Tobacco (Dip, Snuff or Spit Tobacco) / Naswar/ Kiwam

- It is a type of finely ground or shredded, moistened smokeless tobacco product.
- Naswar is similar to 'Dip' consumed mostly in Afghanistan, Pakistan, Iran, Kazakhstan, Kyrgyzstan, Russia, ~~Tajikistan~~ Turkmenistan, and Uzbekistan.
- Dip causes excess salivation and the saliva needs to be spit out. Swallowing the saliva-tobacco mixture induce nausea and vomiting.
- Both, Dip and Naswar is used by keeping it under the lower lip, or inside the cheek, for 15 to 30 minutes.

Kiwam

- Ingredients –Thick paste prepared from tobacco leaf extract, spices (e.g., saffron, cardamom, aniseed) and additives such as musk.
- Mode of Use –Placed in the mouth and chewed or used as an optional ingredient in betel quid.
- Popular in India, Pakistan, Bangladesh

Similar product – Chimo in Venezuela, Columbia

Creamy snuff (Mishri)/ Gul/ Gadakhu

All these are used by rubbing over the teeth

Creamy Snuff

- It is a mix of tobacco, clove oil, glycerin, spearmint, menthol and camphor
- It is available as a toothpaste, popular amongst Indian women.
- Highly addictive.
- Brands available - Dentobac, Tona, Ganesh

Gadakhu is paste made from tobacco leaf dust, Sheera (molasses) , lime and gerumati (red soil)

Creamy snuff (Mishri)/ Gul/ Gadakhu.....

□ Gul is the powdered form of tobacco dentifrice.

It contains flavored chewing tobacco flakes mixed with aromatic spices, menthol, herbs, fragrances, saffron, raw kiwam, silver flakes and sandalwood oil. Lime is provided separately by the manufactures.

Red Toothpowder is known to contain tobacco

All the tobacco containing products, besides their tobacco toxicity, are highly abrasive to tooth enamel*.

Snus

- Made from steam-cured tobacco, often mildly flavored and does not require spitting
- Sucked by keeping it between teeth and lip (generally upper arch)
- It is less harmful than cigarette smoking and Gutka chewing
- Popular in Sweden and other Scandinavian countries

Dry snuff/ Tapkir/ Bajar

- It is finely ground tobacco powder and may also contain menthol, camphor, eucalyptus for flavoring
- It is used by lightly “sniffing” into nose
- Mainly used in Eastern part of India

Dissolvable Tobacco & Tobacco gum

- Recent introduction in later half of year 2000 in US
- Contains finely processed tobacco so that it easily dissolves in mouth
- Available as lozenges, strips or sticks. Brands available are Zyn, On! and Velo

Tobacco gum is like Nicotine gum but contains finely powdered tobacco in a gum base.

TUIBUR / TOBACCO WATER / HIDAKPHU*

- ❑ It is tobacco infused water, stored and sold in bottles (made by passing tobacco smoke through water)
- ❑ Can be used as gargle or kept in mouth for 5-10 minutes and then spit out.
- ❑ Prevalent in Manipur and Mizoram, mostly used by women

Non-consumable Tobacco products**

- ❑ Tobacco water/ tobacco juice/ tobacco lime - made by boiling strong tobacco in water (traditional organic disinfectant and used on garden plants)
- ❑ Tobacco paste (used for treatment of wasp, scorpion, hornet and bee sting)

Conclusion

- The presentation gives an overview of all types of tobacco products- Consumable (smoked and smokeless) as well as Non-consumable, but it cannot be complete.
- Tobacco products and their use vary from region to region.
- Newer tobacco products keep getting added so that consumers' interest and curiosity continues and product sale is ensured.
- As health professionals, it is important to remain informed, so that the patients can be helped to the maximum
